

# FlashCo®

## LIFETIME FLASHING™

**Guaranteed not to leak  
and backed with a  
50 Year Warranty!**

- More bellows (full 3" in height)
- Each bellow is designed deeper with more curvature
- All this results in Maximum Flexibility with minimal stress at the joint.
- Joint contact area increased by 800%

### NEW JOINT DESIGN! Engineered to Prevent Leaks With Added Strength

FlashCo® is proud to introduce a line of newly designed roof flashings. This innovative design is engineered to be waterproof and is the strongest lead flashing ever produced. Our positive overlapping seal provides the most reliable protection available. The FlashCo® Lifetime Flashing is guaranteed not to leak and is warranted against defects and corrosion for 50 years.

Lead used in roofing has proven for centuries to be superior in performance, longevity and ease of installation. St. Paul's Cathedral in London was built in the 17th century and is only one of the world's architectural treasures covered with lead that has never required re-roofing. Lead in roofing is environmentally benign because of its extreme low rate of release back into the environment. If the flashing was washing away at any significant rate it would have a very short life cycle; lead stays on the roof.

FlashCo® is a registered trademark and guarantees you only the best material. FlashCo® uses high compression lead specifically alloyed for roofing and corrosion resistance. FlashCo® lead meets ASTM Spec. B 749-85.

**Wind Resistance? Lead blows  
aluminum out of the water!**
